

Dynamics by immunodeficiency and an infection with Borrelia and / or co - pathogens

Transmission time after the tick bite and incubation period after infection

Transmission time of pathogens after the tick bite = immediately

Incubation time = immediately or after a symptom - free interval of up to 8 years and more

Literature <http://www.kabilahsystems.de/transmissbeizeckenstich.pdf>

Literature <http://www.erlebnishaft.de/dauerheilung.pdf>

Acute - Chronic - short-term therapy - long-term therapy

Acute "disease" = disease outbreak. Immediately after the tick bite or acutely after a free interval of up to 8 years or more

Chronic "Lyme disease" = 4 weeks after disease onset and disease duration > 6 months

Brief Therapy = treatment duration 14 days to 3 weeks

Long-term therapy = treatment duration longer than 3 weeks

Multi-infection, immunodeficiency caused, multi-causal - Multi-system - disease

The "disease" is a mixed infection in an immuno -compromised -deficient host

Literature <http://www.kabilahsystems.de/antibiosetherapieplan.pdf>

Literature <http://www.erlebnishaft.de/kommentcd57.pdf>

Contra-indications for antibiotic therapy in long-term "disease"

Under certain conditions, long-term antibiotics may be contraindicated
